European RF Exposure Information

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves recommended by international guidelines. These guidelines were developed by the independent scientific organization ICNIRP and include safety margins designed to assure the protection of all persons, regardless of age and health.

The guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 2 W/kg.
As mobile devices offer a range of functions, they can be used in other positions, such as on the body as described in this user guide[*].
Highest SAR value:

Model	At the Ear[**]	On the Body
936SH	0.925 W/kg	0.642 W/kg

As SAR is measured utilizing the device's highest transmitting power the actual SAR of this device while operating is typically below that indicated above. This is due to automatic changes to the power level of the device to ensure it only uses the minimum level required to reach the Network. The World Health Organization has stated that present scientific information does not indicate the need for any special precautions for the use of mobile devices. They note that if you want to reduce your exposure then you can do so by limiting the length of calls or using a handsfree device to keep the mobile phone away from the head and body.

[*]Please see Electromagnetic Waves on the left for important notes regarding body-worn operation.
[**]Measured in accordance with international guidelines for testing.

FCC Notice

- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
  (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications not expressly approved by the manufacturer responsible for compliance could void the user's authority to operate the equipment.

FCC Information to User

This equipment has been tested and found to comply with the limits of a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.
However, there is no guarantee that interference will not occur in a particular installation; if this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
1. Reorient/relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio/TV technician for help.

FCC RF Exposure Information

Your handset is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.
The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless handsets employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg.
Highest SAR value:

Model	FCC ID	At the Ear	On the Body
936SH	APYHRO00103	0.326 W/kg	0.610 W/kg

This device was tested for typical body-worn operations with the back of the handset kept 1.5 cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5 cm separation distance between the user's body and the back of the handset. The use of beltclips, holsters and similar accessories should not contain metallic components in its assembly.
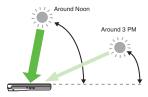

The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided. The FCC has granted an Equipment Authorization for this model handset with all reported SAR levels evaluated as in compliance with the FCC RF emission guidelines. SAR information on this model handset is on file with the FCC and can be found at https://fjallfoss.fcc.gov/oetcf/eas/reports/GenericSearch.cfm under the Display Grant section after searching on the corresponding FCC ID (see table on the left). Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications & Internet Association (CTIA) Website at http://www.phonefacts.net.

Solar Charging Precautions

General Use

936SH features a built-in solar charger. Unlike solar calculators, 936SH Solar Panel obtains energy from sunlight only; battery cannot be charged using electric light.

- Charging starts automatically when Solar Panel is exposed to sufficient sunlight (Solar Indicator lights green; see **P.1-6**). Solar charging may be unavailable depending on exposure/weather conditions.
- For safe charging, charge for up to approximately 90 minutes.
- Solar charging is not available when:
  - Handset is extremely hot or cold
  - Remaining charge is approximately 75% or more
  - Software Update is in progress
  - Charging with Desktop Holder (included)/ AC Charger (sold separately)
- Battery Time shortens near end of battery life.
- Battery Time varies with environment (season, weather, region, sun position, temperature, etc.), signal strength or settings.

Overheating

- **Solar charging may stop due to Solar Panel overheating; discontinue exposure to prevent damage/injury.**
- Handset may be hot during/after solar charging; be careful when touching it.

Usage Environment

Outdoors

- **Battery may not charge if handset is too hot.**
- Avoid charging on surfaces that heat up in the sun (sand, rock, outdoor air conditioning units, metal tables, concrete, asphalt, etc.); may cause malfunction. (Unsafe surfaces vary by country/region.)
- Solar charging is not available in cold places.
- Never expose handset to direct sunlight at pool or beach; may cause malfunction.
- Never expose case-enclosed handset to direct sunlight. Handset may overheat, resulting in malfunction.
- To charge handset worn via neckstrap, make sure Solar Panel faces sunlight.

Indoors

- Solar charging may be unavailable through windows with special glass (frosted, filmed, heat reflective/absorbing, etc.). Open curtains.
- Battery cannot be charged using electric light.

Inside Vehicles

Never charge battery inside unattended vehicles. Closed vehicles may become extremely hot. Handset may overheat, resulting in fire, warping or malfunction.

Other Precautions

- **Never attempt to charge battery with incandescent (including halogen or infrared) lamps.**
- **Never focus sunlight on Solar Panel using mirrors, magnifiers, lenses, etc. Handset may overheat, resulting in fire or malfunction.**
- Solar charging is not available if Solar Panel is covered (even partially) with objects.
- Do not insert objects between Display and Keypad to angle Solar Panel; may lead to unintended operation.
- Battery may not charge completely if handset is in use.
- Do not place stickers, etc. over Solar Panel; solar charging may be unavailable.
- Do not write on Solar Panel with oil-based markers, or attach cosmetics (lipstick, foundation, sunscreen, etc.) to it; solar charging may be unavailable.
- After powering on 936SH, waterproofing/solar charging guidance appears. Read before use. (Guidance may not appear if battery is low.)

- Dust, smudges, etc. on Solar Panel affect charging. Clean with soft dry cloth.
- Solar charging may be unavailable if handset is left with an exhausted battery for approximately one week.

Water Resistance

936SH Water Resistance

936SH complies with IPX5 (former JIS protection level 5)[1] and IPX7 (JIS protection level 7)[2] water protection standards, with Port Covers closed and Battery Cover locked firmly.

[1]IPX5 compliant means that this handset continues to function as a phone after being subjected to a water jet (approximately 12.5 liters/min.) discharged from a nozzle (inner diameter: 6.3 mm), from all directions (approximately 3 m from handset) for at least 3 minutes.

[2]IPX7 compliant means that this handset continues to function as a phone and no water seeps inside after being gently lowered into a tank filled with still tap water (at room temperature) to the depth of 1 m, and immersed at the bottom for approximately 30 minutes.

Malfunction resulting from misuse is not covered by the warranty.

- Lock Battery Cover and close Port Covers firmly. Liquid may seep inside handset if there is debris (hair, sand, fibers, etc.) between cover and base.
- If Battery/Port Covers are left open liquid exposure may cause handset malfunction/electric shock. Power handset off, then remove battery.
- If handset is wet, wipe it with dry cloth.
- Do not open/close Battery/Port Cover with wet hands or while handset is wet.
- Handset is resistant to fresh/tap water at normal temperature (5°C - 35°C) only.

Precautions

- Do not subject handset to soap, detergent, bath powder/oil, sea/pool/spa water, hot water, sand, dirt, etc.
- Do not soak handset in bath or pool; never use it in water (including opening/closing of handset and pressing keys).
- Handset is not resistant to water pressure. Avoid high-pressure water/shower (over 6 liters/min.) or water immersion.
- Do not expose handset to extreme humidity for long periods; avoid prolonged use in bath/shower rooms.
- Do not use in saunas. Avoid hot air from dryers, etc.

- Use handset within 5°C - 35°C (up to 40°C for temporary use in bath/shower rooms, etc.) and 35% - 90% humidity.
- Avoid extreme temperatures (e.g., near stoves, inside refrigerators, etc.).
- Volume may be low when Microphone/ Earpiece/Speaker is wet; dry handset before use.
- Battery, Desktop Holder and optional accessories are not waterproofed.
- Do not subject handset to strong shocks or impacts; do not poke Microphone, Earpiece, Speaker, etc. with a cotton swab or sharp object; water resistance may be affected.
- Avoid placing handset directly on sand. Sand may penetrate Earpiece, Speaker, etc., resulting in low volume.
- Do not move handset directly from a cold place to a warm humid place; condensation may occur. Should this happen, dry handset naturally at room temperature.
- 936SH does not float on water.
- Keep handset out of heavy rain.
- Do not let liquid-exposed handset remain wet; exposure to cold may freeze liquid causing malfunction.
- Damaged Battery/Port Cover affects water resistance; contact a SoftBank Shop.

xvii

Charging Precautions

- Battery, Desktop Holder and optional accessories are not waterproofed. Avoid exposure to liquids or high humidity (e.g., precipitation, bath/shower room, restroom, etc.); may cause fire, electric shock or damage.
- Never charge battery while handset is wet; may cause fire or damage due to electric shock or short-circuit.
- Close Port Cover firmly after charging via External Device Port. Using Desktop Holder helps secure External Device Port waterproofing.
- Do not touch Desktop Holder or Charger with wet hands. Electric shock may occur.
- Do not use Desktop Holder or Charger in rooms in which water is regularly in use (kitchen, bath/shower room, etc.); may cause fire or electric shock.

Gasket Care & Maintenance

Proper care of the rubber seals around Port Covers and Battery Cover is crucial for continued handset water resistance.

- Do not remove or damage gaskets. Keep them clean.
- Do not insert sharp objects through Port/Battery Cover gaps; may damage gasket and affect water resistance.
- If Port/Battery Cover gasket is damaged or deformed, replace it with a new one.
- To maintain water resistance, replace gaskets every two years regardless of their condition.
- For gasket replacements, contact a SoftBank Shop.
- Damaged Port Cover affects water resistance; contact a SoftBank Shop.
- If Battery Cover is damaged, replace it with a new one. Use of damaged cover may cause electric shock, battery corrosion, etc. due to water seepage.

Specific Absorption Rate (SAR)

936SH meets the government's requirements for exposure to radio waves.
These requirements are based on scientific basis to assure that radio waves emitted from mobile phones and other handheld wireless devices do not affect human health. They require that the Specific Absorption Rate (SAR), which is the unit of measurement for the amount of radiofrequency absorbed by the body, shall not exceed 2 W/kg[*]. This limit includes a substantial safety margin designed to assure the safety of all persons, regardless of age or health, and meets the international standard set by International Commission on Non-Ionizing Radiation Protection (ICNIRP) in cooperation with World Health Organization (WHO).

All mobile phones, prior to product launch, must be certified as compliant with government requirements as stipulated by the Radio Law. 936SH has been granted Technical Regulations Conformity Certification by TELECOM ENGINEERING CENTER. Its highest SAR value is 0.864 W/kg. This value was obtained by TELECOM ENGINEERING CENTER as part of the certification process. SAR tests were conducted with handset transmitting at its highest certified power level in accordance with testing methods set by the government. While there may be differences between the SAR levels for various handsets, they all meet the governmental requirements for safe exposure. The actual SAR level of the handset while operating can be well below the highest value. This is because the handset is designed to operate at multiple power levels so as to use only the power required to reach the Network.

Additional information on SAR can be obtained on the following Websites.

Ministry of Internal Affairs and Communications
http://www.tele.soumu.go.jp/e/sys/ele/index.htm
Association of Radio Industries and Businesses (ARIB)
http://www.arib-emf.org/initiation/sar.html (Japanese)

[*]Requirements are stipulated in Radio Law (Ordinance Regulating Radio Equipment, Article 14-2).
